

Instructions for Authors (<http://www.academic-ophthalmology.com>)

Guidelines: Please follow these guidelines carefully to assist the Editorial Staff. Careful preparation of manuscripts reduces the amount of work for our staff and prevents delays in publishing. Manuscripts should present original, unpublished content not being considered for publication in another journal or elsewhere. If accepted, the text, figures, and data shall not be published elsewhere without the consent of the Editors and Publisher of the Journal. There is no limit on the length of the manuscript; however, the manuscripts are expected to be concise. Sections: Original articles, Reviews, Editorials, Perspectives, Pearls and Pitfalls, Residency Program Director Corner, Ask the Experts, and Best Practices from the Field.

Research Articles: Manuscripts are original, unpublished works in academic ophthalmology. A research article must include these sections: Title Page, Abstract, Introduction, Methods, Results, Discussion, and References. Figures, Tables, and Acknowledgements should be submitted with the manuscript.

Literature reviews, Perspectives, and Editorials: The Editors invite comprehensive reviews of current topics in the field of academic ophthalmology. The Editor (andrew-lee@uiowa.edu) should be contacted by e-mail in advance with an outline proposal for the topic. Reviews and Editorials are still subject to peer review, and publication is contingent upon acceptance by the reviewers and the Editor. Reviews consist of the following sections: Title Page, Abstract, Introduction, Discussion, and References. If the review consists of Results, then the manuscript should include a Methods and Results section. Figures, Tables, and Acknowledgements should be submitted with the manuscript.

Other Types of Articles: Authors must submit proposals via e-mail to the Editor (andrew-lee@uiowa.edu) before submission.

Manuscript Preparation: Authors must clearly label each section of the manuscript (e.g., Abstract, Introduction, Methods, etc.). Include Figure legends and Tables after the References section. If any figures or data were previously published, then written permission from the publisher of the previous material must be included with the manuscript. It is the authors' sole responsibility to obtain this permission, and the Journal cannot publish a manuscript until authorization has been acquired.

General Guidelines: Do not use unnecessary text styles. Italics are used for genus and species names, gene symbols, and the first three letters of restriction enzymes. Bold text is applied only for headings. Do not use underlining. Read your manuscript carefully for spelling and grammar errors. Write for a general audience. Use double-spacing and Times New Roman, 12 point font in the manuscript.

TITLE PAGE: All manuscripts should include the title, the names of the authors, the authors' institutional affiliations, and contact information of the corresponding author. Each author may also include an e-mail address or a web address.

ABSTRACT: Abstracts should be concise and summarize the work presented. Research Articles must be structured with these subsections: Purpose, Methods, Results, and Conclusions. All other articles will have descriptive abstracts summarizing the topics covered in the paper.

INTRODUCTION: Be concise and provide a general introduction discussing the relevance of the manuscript. Do not use subheadings. Use of relevant literature is essential.

METHODS: The Methods should be written with sufficient detail to facilitate replication of the work presented. Non-proprietary names should be used, and the name of the supplier of items used in the research should be denoted along with their full company name and location (city, state/country). Research using animals should include a statement that animal care guidelines comparable to those published by the Institute for Laboratory Animal Research or the US Public Health Service were followed. If human subjects were used, then indicate that an appropriate institutional review board (IRB) has approved the project. If an IRB is not available, then the authors should follow the principles of the Declaration of Helsinki.

RESULTS: The research findings should be presented in the Results without interpretation or discussion. In short manuscripts where the interpretation of the data is relatively simple, the data may be discussed in a combined Results and Discussion section.

DISCUSSION: The discussion should consist of interpretation and commentary on the data, results, and findings presented within the scope of the investigation presented in the manuscript.

ACKNOWLEDGEMENTS: Acknowledgements for individuals making significant non-authorship contributions to the manuscript are stated in this section. Funding support for the research should be listed. Authors should disclose any commercial interest or companies presented in the manuscript. All prior presentations of the work at meetings should be listed. Do not include these presentations as manuscript references.

REFERENCES: The citations in the text are identified by numbers in brackets (e.g., [1,5, 12, 20-25]). For users of Endnote, the Journal uses reference formatting consistent with the journal *Biology of Reproduction*. Citations are numbered in the order of appearance in the manuscript. The references are listed in the References with corresponding numbers to the citations in the text. References to unpublished work should be made parenthetically in the body of the text and not listed in the References section.

Examples of formatting for references:

Gasymov OK, Abduragimov AR, Yusifov TN, Glasgow BJ. Structural changes in human tear lipocalins associated with lipid binding. *Biochim Biophys Acta* 1998; 1386: 145-156.

Yanoff M, Fine BS. *Ocular Pathology*. 5th ed. St. Louis, MO: Mosby; 2002. p. 311-329.

Cason, SA. "There is no right or wrong." *Mommy MD*. <http://www.mommymd.org>/ Posted Nov. 19, 2006. [Accessed Jan. 1, 2008.]

FIGURES: Each figure should be numbered with Arabic numerals and correspond to their sequence of appearance in the manuscript, e.g., "Figure 1". The Figure legends should be included after the References section. Each Figure legend should have a title and caption with sufficient detail to explain the figure without referring to the main text. Labels and abbreviations must be explained in the caption. We encourage the authors to use color figures if this will facilitate better communication of their results. Figures that are composites of several images should have white spacing between the different images. All patient identifiers must be removed from photographs and figures before submitting to the Journal, or a written release from the patient is submitted with the manuscript.

TABLES: Tables may be submitted in word processor or HTML format, and tables should be numbered with Arabic numerals corresponding to their sequence of appearance in the manuscript, e.g., "Table 1". Each table should have a title and caption. The caption should have sufficient detail to explain the table without referring to the main text.

Digital Files: Text should be submitted in Rich Text Format (.rtf) or Microsoft Word Format (.doc). All manuscripts will be published in the *Journal of Academic Ophthalmology* style; thus, any special formatting used by the author(s) may be lost. Figures may be submitted in the following digital formats: TIFF (.tif), JPG (.jpg), and Photoshop (.psd). Figures submitted in Microsoft PowerPoint or Word format are unacceptable and will be returned to the authors for reformatting into one of the accepted formats. When preparing figures, diagrams, and charts, the resolution should be at least 300 dpi with a minimum size of 4" x 6". If you use Photoshop format, then you may create additional layers to mark your figures, but do not flatten the images.

Submission of Manuscripts: All submissions must be done via e-mail or FTP to our server (editor@fepint.org). Each submission must include a letter from the corresponding author, manuscript, supporting documents/releases, and Transfer of Copyright (<http://www.academic-ophthalmology.com>). All communications between the authors and the Journal will be handled by the corresponding author. Each part of the manuscript must be submitted in a separate file (e.g., text, figures, and tables). DO NOT embed figures or tables into the main text of the manuscript. Use the last name of the author and the date (month/year) of submission to name the files. The signed Transfer of Copyright forms must be signed by all authors, scanned, and sent electronically via e-mail (editor@fepint.org) or FAXED (443-817-0794).

Author's Letter to the Editor: The letter should detail the clinical and/or scientific importance of the manuscript. The title, authors, and corresponding author should be indicated along with the contact information for the corresponding author. The authors may recommend reviewers and may also request particular reviewers to be excluded from the pool of potential reviewers. Please explain briefly why particular individuals should be excluded from the reviewer pool. Manuscripts are subjected to blinded reviews.
